End 2''' Old Newport Highway East End

Water main flushing is a necessary function for NU's Waterline Maintenance Program, which maintains the system's overall water quality.

Although water will remain safe during this process, customers may encounter the following conditions during flushing:

- A temporary drop in water pressure to your residence or place of business
- Rusty, brown or cloudy water (These conditions will subside after flushing is complete)
- Avoid doing laundry during flushing operations

After flushing operation is complete:

- Open a cold-water facet and let water flow until clear. ( When available use an outside spigot)
